About me

I have held positions as a Full-stack Developer, Back-end Software Engineer, and Back-end Developer across many projects, working with different people and teams mostly remotely. I am specialized in the development of Back-end applications.

I have experience working with Node.js, Angular, PHP, integrating CI/CD, conducting unit testing, and diagramming database schemas (SQL/NoSQL).

I am passionate about teaching and trying to learn new skills every day. Committed to continued growth and sharing experiences with the teams!

Professional Experience:

Atom – Back-end Developer (February 2022 – May 2023)

Experienced software developer driving key improvements, writing clean code, and ensuring top-quality projects. Proficient in efficient script creation and confident in ability to make a positive impact independently or as part of a team.

Santander Tecnologia – Software Engineer (April 2021 – February 2022)

Integrated APIs using BFF architecture, managed batch processing and CronJobs. Utilized SCRUM/Kanban to prioritize projects and worked collaboratively with Agile methodologies. Demonstrated technical expertise working on complex tasks.

GenIT – Full-stack Developer (January 2020 – April 2021)

Designed and developed tech projects in Agile, guiding clients through the process. Monitored/administered systems, provided support, and implemented continuous improvements for optimal performance. Gained hands-on experience with Agile, client communication, and systems administration principles.
